

WARNING SMS Environment Alert System

Benefit to your Business?

Computer Technology is an essential tool in today's modern business operations. A complete and reliable computer network system increases the productivity and profitability of your business. Welcon deploys, troubleshoot and fix it fast, that's when our service contract clients need us most. You can rely on our support team to provide emergency response for critical systems failure and same day service for most other issues.

- Small cost effective investment
- Business infrastructure is monitored
24/7
- Reduces the risk of downtime
- Fast Reliable Response time

What is it?

The SMS Alert System monitors the Environment of your Server Room, informs you and Welcon of a power failure, changes in temperature and many other alerts to inform you that your business computer system is operational and healthy.

How does it Work?

The SMS Alert System includes a thermometer that will monitor the temperature of your server room, when there is an alert either from the thermometer or the server/ups or other equipment a SMS message will be sent to a mobile of your choice and to Welcon to alert us of the problem. Welcon will then communicate with you to organise a solution.

How Much?

The SMS alert System can be purchased outright for \$689 with an ongoing annual fee of \$69.95. This includes the thermometer, installation and SMS phone credit for 12months.

To improve your monitoring system and make sure you reduce your business downtime, contact Rhys Williams at Welcon today for more information on the SMS Alert System.
